EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Matthew P. Dugan on 2/24/2005.

The application has been amended as follows:

IN THE CLAIMS

Cancel claims 1, 18 and 24.

Claim 2. (Currently Amended) A connector adapted for use with an associated fluid line, said connector comprising:

a connector body having a passage dimensioned to receive the associated fluid line;

a capturing member supported on said connector body and suitable for retaining the associated fluid line in said passage;

a sealing member disposed within said passage and suitable for forming a fluid-tight seal between said connector body and the associated fluid line;

a stiffening member disposed within said connector body along said passage, said stiffening member having a sleeve portion and a flange portion; and,

an indicator provided on said stiffening member along at least one of said sleeve portion and said flange portion and adapted to indicate that the associated fluid line has

been received a predetermined distance into said passage ~~with said indicator provided on said stiffening member along at least one of said sleeve portion and said flange portion.~~

Claim 5. (Currently Amended) A connector according to claim 4 2, wherein said capturing member includes a radially inwardly extending annular tooth suitable for engaging the associated fluid line.

Claim 8. (Currently Amended) A connector adapted for use with an associated fluid line having an inside wall and an outside wall, said connector comprising:

a connector body having a passage extending therethrough, said passage dimensioned to receive the associated fluid line;

a capturing member supported on said connector body and ~~suitable for retaining~~ the associated fluid line in said passage;

a sealing member disposed within said passage and ~~suitable for~~ forming a fluid-tight seal between said connector body and the outside wall of the associated fluid line;

a stiffening member disposed within said passage and at least a portion of said stiffening member is dimensioned to be received within the inside wall of the associated fluid line, said stiffening member including a flange portion and a sleeve portion; and,

an indicator disposed within said connector body at least partially along one of said flange portion and said sleeve portion, and said indicator being adapted to indicate that the associated fluid line has been received a predetermined distance into said passage.

Art Unit: 3679

Claim 19. (Currently Amended) A connector adapted for use with an associated fluid line having an inside wall and an outside wall, said connector comprising:

a connector body having a first end adapted to receive the associated fluid line, a second end opposite said first end, a passage extending through said connector body between said first and second ends, and a shoulder within said passage between said first and second ends;

a capturing member supported on said connector body, said capturing member adapted to engage engaging the outside wall of the associated fluid line to retain the associated fluid line in said passage;

a sealing member disposed within said passage and ~~suitable for~~ forming a fluid-tight seal between said connector body and the associated fluid line;

a stiffening member having a sleeve portion and a flange portion, said stiffening member is positioned within said passage such that said flange portion is adjacent said shoulder, said sleeve portion dimension to be received within the inside wall of the associated fluid line; and,

an indicator disposed within said passage and adapted to indicate that the associated fluid line has been received a predetermined distance into said passage, said indicator being disposed along at least a portion of one of said flange portion and said sleeve portion of said stiffening member.

Claim 25. (Currently Amended) A connector according to claim 24 20, wherein said window is operative to provide said visually observable characteristic by

Art Unit: 3679

exposing at least one of the inside wall, the outside wall and the end portion of the associated fluid line.
